

English for the Students of Medicine (ESM) II

Introduction

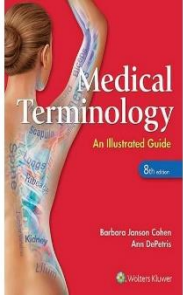

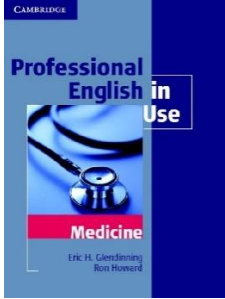

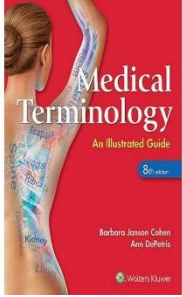

This is a three-credit ESP course for students of Medicine. Each session in this course involves four sections. The first section (**Case Studies**) familiarizes the students with medical terminology used in context and applied to real-life situations. The second section (**Professional English**) is aimed to provide the students with the basic jargons used in their field of study. The third section (**Reading Medicine**) is devoted to expose the students to authentic medical texts. Students will focus on reading both extensively for general comprehension and intensively for details. Finally, the fourth section (**Hospital English**) is intended to enhance the speaking and listening proficiency of the students within the context of a hospital. In fact, this part of class develops the vocabulary, language, and skills that students will need when working in a medical environment. These include talking about the body, describing signs of illness, and conveying instructions to patients and colleagues.

One new section added in this course is **Medical Research Articles** which familiarizes students with the basics of how medical research articles are written. This is offered in the final two sessions of the course.
